

# KNOWN-ITEM SEARCH

Alan Smeaton  
Dublin City University

Paul Over  
NIST

# Task

## 2

**Use case:** You've seen a specific given video and want to find it again but don't know how to go directly to it. You remember some things about it. Its a natural, everyday scenario

### **System task:**

- Given a test collection of short videos and a topic with:
  - some words and/or phrases describing the target video
  - a list of words and/or phrases indicating people, places, or things visible in the target video
- Automatically return a list of up to 100 video IDs ranked according to the likelihood that the video is the target one (is 100 realistic ?),  
-- OR --
- Interactively return a single video ID believed to be the target
  - Interactive runs could ask a web-based oracle if a video X is the target for topic Y. Simulates real user's ability to recognize the known-item. All oracle calls were logged.
- ▣ Task is replicable, has low judging overhead and is appealing

# Data

3

~ 200 hrs of Internet Archive available with a Creative Commons license

~8000 files

Durations from 10s – 3.5 mins.

Metadata available for most files (title, keywords, description, ...)

122 sample topics created like the test topics – for development

391 test topics created by NIST assessors, who ...

looked at a test video and tried to describe something unique about it;

identified from the description some people, places, things, events visible in the video.

No video examples, no image examples, no audio; just a few words, phrases

This is no YouTube in scale, but it is in nature. Its more like a digital library

# Example topics

4

500 1-5 KEY VISUAL CUES: laptop, young man, swivel chair, lamp, dresser

QUERY: Find a video of a young man narrating a video showing a young man in jeans sitting in front of a laptop in a room with a desk, table lamp, and dresser and then moving to a bedroom with two females sleeping and being awoken in bed with the narrator mentioning "ambush cinematography" and asking what is on the tv.

---

501 1-5 KEY VISUAL CUES: Newsreel clips, Nautilus Nuclear submarine, NY harbor, hunter killer helicopter, Pan AM passenger jet

QUERY: Find video featuring Newsreel clips of Nautilus Nuclear submarine entering NY harbor, a Hunter Killer helicopter and the first Pan Am commercial passenger jet

---

502 1-5 KEY VISUAL CUES: Staten Island ferry, Statue of Liberty, Ellis Island

QUERY: Find the video of people using ferry and touring Ellis Island

---

503 1-5 KEY VISUAL CUES: action-pack clip, man-flip, automatic weapon, light saber, car-spinning

QUERY: Find a video of an action-pack clip showing a man in a blue jacket doing a flip and hitting another man, a man firing an automatic weapon, a man with a light saber and a white car spinning around.

---

504 1-5 KEY VISUAL CUES: man, city backdrop, business suit

QUERY: Find the video with a man in a business suit broadcasting in front of a city backdrop, text on screen, relating to various news stories

# TV2011 Finishers (9 from 40 applicants)

KSLab-NUT *	Nagaoka University of Technology in Japan
SCUC	Sichuan University of China (no paper !)

\* - submitted interactive run(s)

# TV2010 Run conditions

6

## Training type (TT):

- A used only IACC training data
- B used only non-IACC training data
- C used both IACC and non-IACC TRECVID (S&V and/or Broadcast news) training data
- D used both IACC and non-IACC non-TRECVID training data

## Condition (C):

- NO the run DID NOT use info (including the file name) from the IACC.1 \*\_meta.xml files
- YES the run DID use info (including the file name) from the IACC.1 \*\_meta.xml files

# Evaluation

7

Three measures for each run (across all topics):

- mean inverted rank of KI found (0 if not found)
  - for interactive (1 result per topic) == fraction of topics for which KI found
  - Calculated automatically using ground truth created with the topics
- mean elapsed time (mins.)
- user satisfaction (interactive) (1-7(best))

# Results – topic variability

8

Topics sorted by number of runs that found the KI

e.g., 139 of 391 topics (35%) were never successfully answered

# 2010 Results – topic variability

9

Topics sorted by number of runs that found the KI

e.g., 67 of 300 topics (22%) were never successfully answered

# Results – topic variability

10

Histogram of “KI found” frequencies

# 2010 Results – topic variability

11

Histogram of “KI found” frequencies

# 2010 Results — does amount of metadata

12

Number of words in known-item's title + keywords + subject + description

# Not found vs. found – what's the difference?

13

**0860 CUES:** woman, brown hair, brown couch, light blue shirt

**0860 QUERY:** Find the video with a woman who has shoulder length brown hair, a light blue shirt, sitting on a brown couch talking about how to talk to angels.

**0861 CUES:** President foreground curtain White House background

**0861 QUERY:** Find a video with President Bush in foreground and blue curtain with White House logo in background.

**0862 CUES:** Andalucia, goat herd, black dog, hills, flowers, woman, red jacket

**0862 QUERY:** Find the video of Andalucia with goat herd and black dog, flowering hillside, and woman in red jacket.

**0863 CUES:** man in blue shirt in a chair, hands moving wildly, web site

**0863 QUERY:** Find a video of a man in a blue shirt sitting in a chair yelling and complaining about Kim Kardashian and says "Kim Kardashian is a whore" and it shows the drinkingwithbob web address.

**0864 CUES:** man, greeting card display

**0864 QUERY:** Find a video with a man standing beside a greeting card display. He is facing the camera and talking.

**0865 CUES:** gorilla, wrecking ball

**0865 QUERY:** Find the video with various scenes that appear in square frames and circle frames, including a picture of a gorilla in a circle and a picture of a wrecking ball in a square.

**0866 CUES:** cat weapon

**0866 QUERY:** Find a video of a cat firing an automatic weapon.

**0867 CUES:** yellowstone park, geyser, music

**0867 QUERY:** Find the video showing yellowstone park and geyser going off as music is played in background

**0868 CUES:** drawing, man, large pink face, large mouth, teeth

**0868 QUERY:** Find a video with a drawing of the upper body of a man with a large pink face and a large mouth showing a lot of teeth. He is wearing a black shirt.

**0869 CUES:** man, t-shirt, German, stain, rubbing

**0869 QUERY:** Find a video of a man in t-shirt speaking in German trying to remove a stain by hard rubbing with a cloth.

# Not found vs. found – what's the difference?

14

**0870 CUES:** SEE SAN DIEGO, WITH THE ULTIMATE PARTY, young people touring, dancing, drinking

**0870 QUERY:** Find a video ad of a bus tour of San Diego for happy hour titled "SEE SAN DIEGO WITH THE ULTIMATE PARTY" and shows young people touring, dancing, and drinking.

**0871 CUES:** four men, singers

**0871 QUERY:** Find a video of four men singing "Are You Going to Scarborough Fair" without accompaniment.

**0872 CUES:** Christof, Tony Blair, Harriet Tubman

**0872 QUERY:** Find a video showing a man in a baseball cap talking about a television newscast with his friend Christof, Tony Blair and honoring the Harriet Tubman Center.

**0873 CUES:** red and white plane, shore

**0873 QUERY:** Find the video of small red and white plane flying over shore.

**0874 CUES:** band, green light, guitar, white hat, audience

**0874 QUERY:** Find a video of a band playing with green light shining on them. One guitarist/singer wears a large white hat low over his eyes. A large audience is excited.

**0875 CUES:** t-shirt, sgirl, flag, photoshop

**0875 QUERY:** Find a video of demonstration of using photoshop to retouch picture of girl wearing yellow t-shirt standing in front of flag

**0876 CUES:** film, chapters, "My Video"

**0876 QUERY:** Find a video with no sound showing film clips identifying three chapters in a home film entitled "My Video".

**0877 CUES:** baby, chair, "Mary had a little lamb", man, "The Itsy Bitsy Spider."

**0877 QUERY:** Find a video of baby boy sitting in a chair while an unseen woman sings "Mary had a little Lamb" followed by a man holding the boy sings "The Itsy Bitsy Spider".

**0878 CUES:** people, movie, chandelier, projection screen

**0878 QUERY:** Find the video with people sitting at tables in a room with a chandelier watching a movie on a projection screen.

**0879 CUES:** man-gray hooded jacket, liquor store, man-white hat, T shirt-McDaddy, man-red Tshirt

**0879 QUERY:** Find a video of a man in gray jacket with hood over head, a liquor store, a man wearing a white hat, black T shirt with MacDaddy written on front buying a 12 pack of beer and man wearing a red T shirt and black hat

# 2010 Questions

22

How did use of IACC metadata affect system performance?

For example:

F_A_YES_MCPRBUPT1_1	0.296
F_A_NO_MCPRBUPT_2	0.004
F_A_NO_MCPRBUPT_3	0.004
F_A_NO_MCPRBUPT_4	0.002
F_D_YES_MCG_ICT_CAS2_2	0.239
F_D_YES_MCG_ICT_CAS1_1	0.237
F_A_YES_MCG_ICT_CAS3_3	0.233
F_D_NO_MCG_ICT_CAS4_4	0.001

How useful were the “1-5 KEY CUES” ?

# Personal overview of finishers

23

PicSOM	Aalto University
AXES-DCU *	Access to Audiovisual Archives
BUPT-MCPRL	Beijing University of Posts & Telecom.-MCPRL
ITI-CERTH *	Centre for Research and Technology Hellas
VIREO	City University of Hong Kong
DCU-iAD-CLARITY *	Dublin City University
KBVR	KB Video Retrieval
KSLab-NUT *	Nagaoka University of Technology in Japan
SCUC	Sichuan University of China (no paper !)

\* - submitted interactive run(s)

# PicSOM

24

- Based on combining simple text search with automatically matched semantic concepts using concept detectors from the semantic indexing task
- Tried to improve search by augmenting the metadata and ASR text with the output of optical character recognition
- Automatic runs used text search with a single video-level index containing all the ASR text plus the title, description and subjects from the meta data.
- Also included text detected by OCR, lemmatisation and used automatic selection of concepts based on matching keywords in the query text.
- Neither the concept detectors nor the lemmatisation managed to improve over baseline

# AXES (speaker slot)

25

- Large FP7 team from DCU, U Twente, Erasmus University, NISV, Oxford University, IIIT and Fraunhofer - 18 authors
  - Used text search on ASR, visual concepts and visual similarity.
  - System was a year 1 build for a multi-year participation in interactive KIS and INS tasks this year
1. Text search based on ASR and metadata used Lucene search engine
  2. Concepts based on a Pyramid Histogram of Visual Words and a very efficient SVM classifier
  3. Similarity search not based on the usual LLFs (colour, texture, etc) but on an object search, an elliptical region
- Three sources then fused together. Desktop user interface with 14 media professionals as users from NISV in Amsterdam

# Beijing U Posts & Telecomms

26

- Regular participant, participated in 5 tasks
- Two methods proposed ... traditional text-based and a novel bio-inspired method.
- Text-based search consisted of text pre-processing, keyword extracting and processing, text-based retrieval, results fusion and re-ranking. Also used a manual ontology for query words, and used on top of Lucene
- KIS bio-inspired framework includes five parts:
  - a bottom-up attention model for determining salient regions,
  - a knowledge base containing various pre-trained object/concept (such as person, car) detectors,
  - a SOM (Self-Organizing Maps) network to map known-item keywords into seven image-related classes,
  - a SVM scene classifier for data filtering,
  - a fusion module to perform content-based retrieval, results fusion and ranking.

Text search was great, bio-inspired was not !

# ITI-CERTH (speaker slot)

27

- Another long-term participant, using TRECVID annually in a series of build-on-build experiments
- Employed VERGE, an interactive retrieval application combining retrieval functionalities in various modalities and exploiting implicit user feedback
  - ▣ Implicit Feedback Capturing Module - time hovering over a shot, previewing
  - ▣ Visual Similarity Search Module - MPEG-7 based
  - ▣ Transcription Search Module
  - ▣ Metadata Processing and Retrieval Module
  - ▣ Video Indexing using Aspect Models and the Semantic Relatedness of Metadata - Bag-of-words representation of video
  - ▣ High Level Concept Retrieval and Fusion Module
  - ▣ High Level Concept and Text Fusion Module

# VIREO (CUHK)

28

- Regular participant, several tasks, building on 2010 participation
- Set out to observe the effectiveness of different modalities (metadata, automatic speech recognition (ASR) and concepts) using same approach as in 2010
- Consistent with previous year's results, the evaluation once again shows that concept-based search is not helpful in known-item search
- Textual-based modalities continue to deliver reliable performance especially the metadata.
- Supplementing the metadata with the ASR feature is not longer able to boost the performance, unlike last year

# iAD-DCU (speaker slot)

29

- Representing a collaboration with Norwegian Universities and groups, funded by Norwegian Research Council
- Building on participation in interactive KIS in 2010 which used novice users
- Implemented an iPad interface to a KIS video search tool to evaluate different display methodologies for KIS interaction.
- Keyframe clustering based on MPEG-7 features using k-means
- Employ concept detection for search and for choosing most representative keyframes.
- Compare baseline non-clustering to a clustering system on a topic by topic basis.
- 6 interactive users in Oslo and in Dublin

# KBVR

30

- Baseline text-only runs plus pseudo-RF and semantic concept re-ranking
- Used Terrier system on ASR and metadata
- Semantic concept re-ranking assumes Known Item is retrieved but needs to be "bubbled up" the ranking
- Query, and initial 'documents' mapped into a semantic space defined using 130 LSCOM concepts with the description of each concept enhanced using a Wikipedia knowledge base

# KSLab Nagaoka University of Tech.

31

- Also developed an iPad interface for interactive KIS, first participation
- Searched the metadata using Lucene, refining salient words integrated into retrieval
- Used video length as a cue for the user

## Sichuan University of China

- No paper to judge

# Questions for participants

32

Why the large(r) number of topics unanswered by all?

- ▣ 2010: 67 of 300 (22%)
- ▣ 2011: 139 of 391 (35%)

Did any groups run their 2011 system on 2010 test data or vice versa?

Any evidence use of metadata as crucial as in 2010?

- ▣ 2 automatic SCUC runs seem to be counter-examples
