Your Visualization Partner

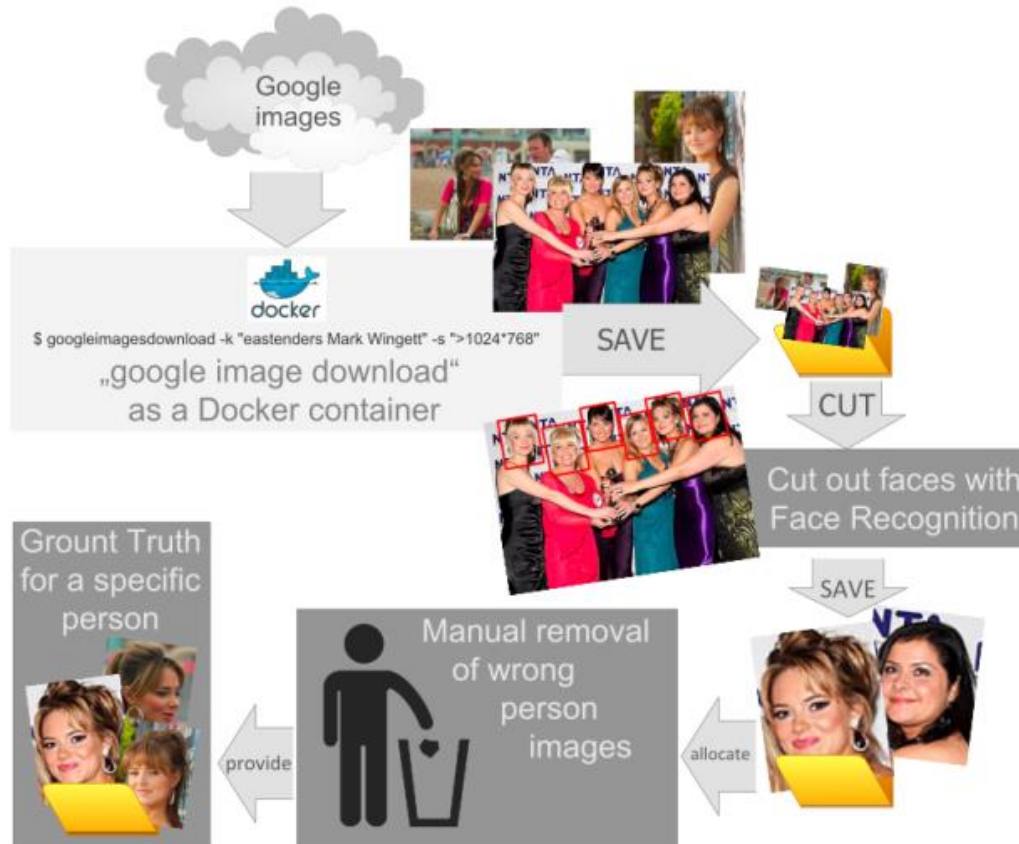

IBS Software & Research GmbH

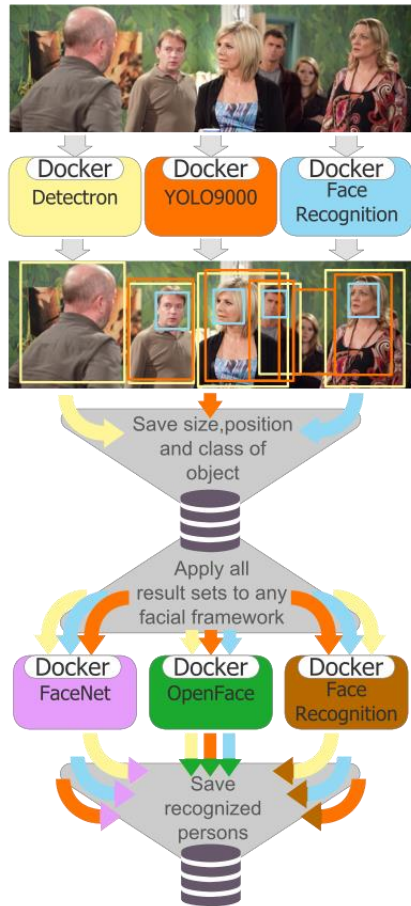

- Focus mainly on architecture
- Docker containers
- Metadata in relational database
- Data and feature extraction through existing frameworks
- Management and data distribution through webservice, API and HTTP

Used frameworks:

- *Places365*^[1] (Locations)
- *Color Thief*^[2] (Color Features)
- *Detectron*^[3] (Persons&Objects)
- *Yolo9000*^[4] (Persons&Objects)
- *FaceNet*^[5] (Faces)
- *OpenFace*^[6] (Faces)
- *FaceRecognition*^[7] (Faces)
- *TuriCreate*^[8] (Clustering)
- *Laravel*^[9] (Web service)

- BBC EastEnders characters known
- Google image search grab samples
- Semi-automatic enhancement
- Ground Truth with 50-300 images/character

- Multiple detections frameworks per frame
- Use Ground Truth to recognize EastEnders characters
- Multiple recognition frameworks per detection
- Storing of intermediate recognition results and their scoring for further processing

Person Recognition Results

Juniorprofessur
MEDIACOMPUTING

TECHNISCHE UNIVERSITÄT CHEMNITZ

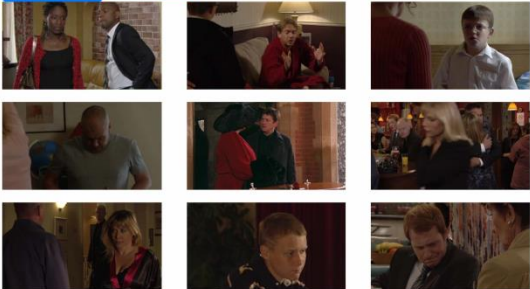

Select a person

Max_Branning

Score:

50

Show results 38397 results

Select a person

Max_Branning

Score:

300

Show results 12163 results

Select a person

Max_Branning

Score:

500

Show results 4253 results

Select a person

Max_Branning

Score:

700

Show results 417 results

- Visual representation of results with webservice
- False detections decreases with increasing of score value
- Number of images decreases with increasing of score value

No knowledge from visualisation
included into automatic evaluation

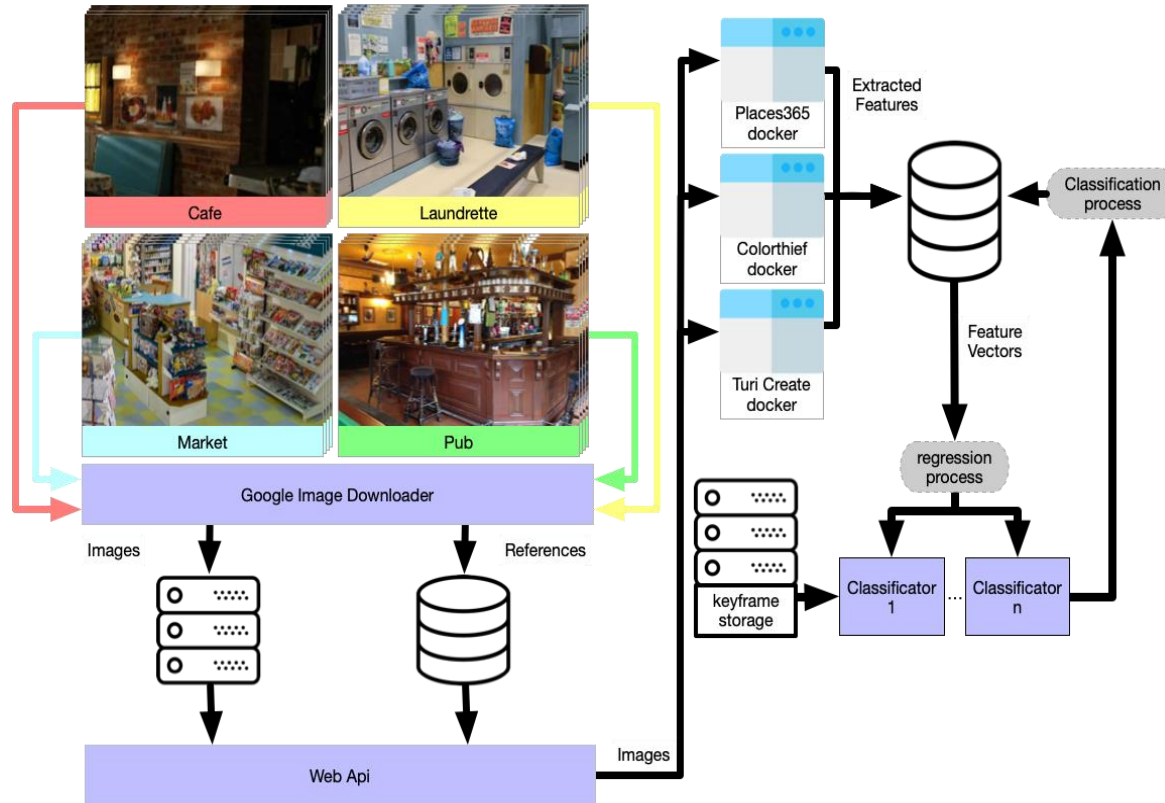

Recognizing Location Unit

Juniorprofessur
MEDIACOMPUTING

TECHNISCHE UNIVERSITÄT CHEMNITZ

- Google image search grab sample images of classes
- Ground Truth to recognize locations classes
- Processed by multiple frameworks
- Storing ten most probable classifications of Places per image
- Ten most dominant color from Colorthief
- TuriCreate determine ten most similar images to create similarity classifier
- Storing of intermediate results and their scoring

Location Recognition Results & Fusion

Location Parameters

Select Location

laundrette

Input Min Score

1000

Select Run

run1

Search

Suche von laundrette mit einem Score größer als 1000 in Run: run1
Der run run1 hat folgende Besonderheit: - alle Frameworks sind gleich gewichtet

554 Elemente gefunden
Kleinsten Score: 1000.0001 Größter Score: 1078.07

461969: 1000.03

478037: 1000.43

479155: 1000.63

21771: 1000.8

16634: 1001.3

481360: 1001.5

360946: 1002.27

355338: 1002.37

119542: 1002.93

482339: 1003.1

1068136: 1003.2

580089: 1003.3

- Visual representation of results
- Analysing the query
- Combination of person and location
- Retrieving best match form database
- Multiple iterations of replenish to get 1000 result images if needed

No knowledge from visualisation
included into automatic evaluation

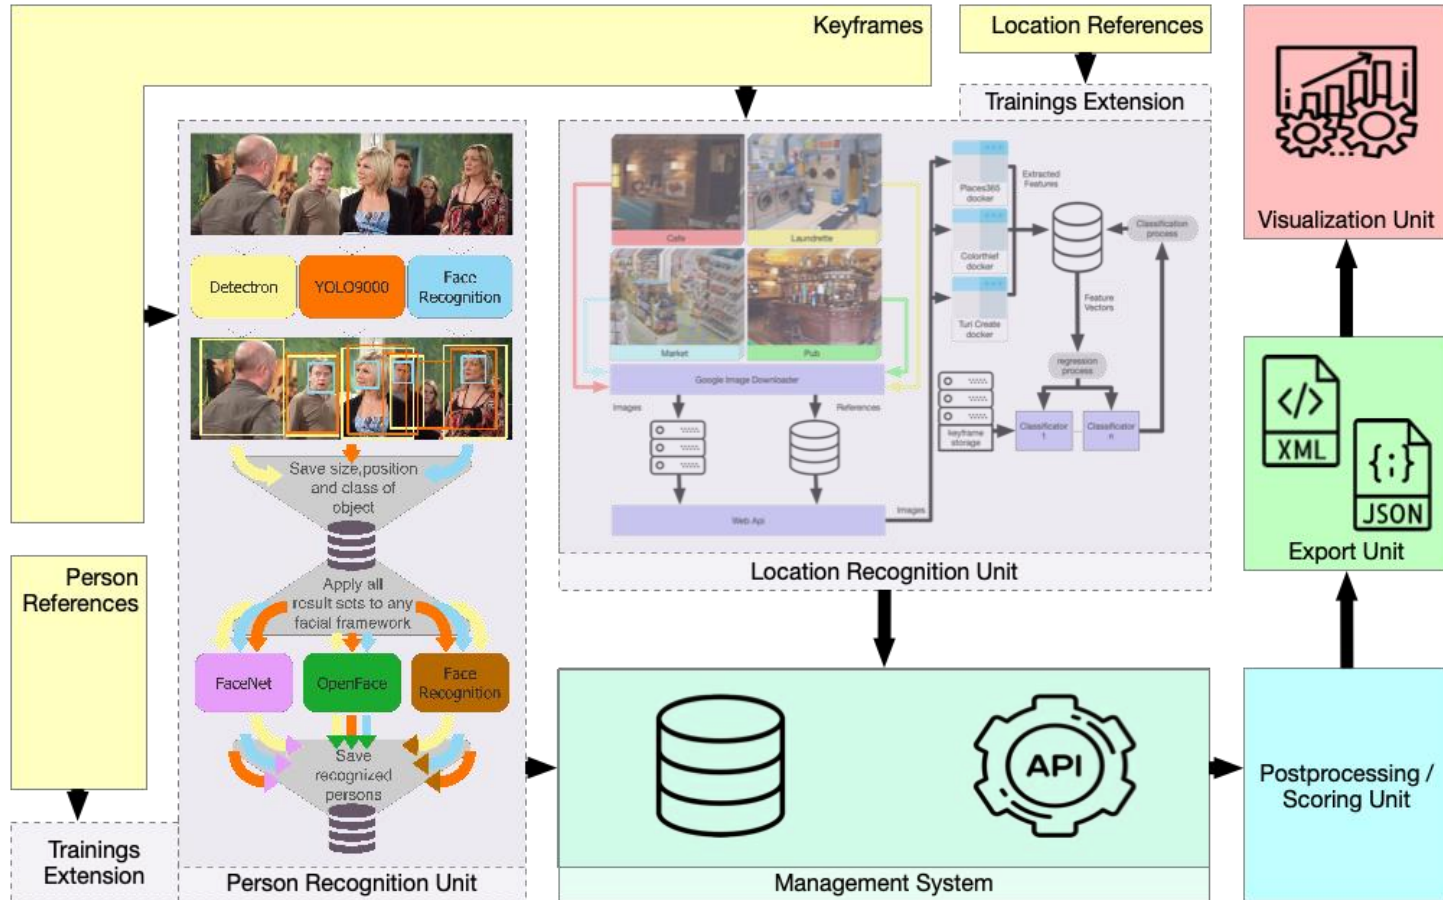

Holistic Workflow

Juniorprofessur
MEDIACOMPUTING

TECHNISCHE UNIVERSITÄT CHEMNITZ

- Fully reconstructed, flexible and extendable system
- Main focus on infrastructure cause only mediocre results
- Fusion of results from different frameworks need optimization
- Automatic runs: MAP: ~0.1
 (1-3) Prec@100: ~0.26
- Interactive run: MAP: ~0.25
 (4) Prec@100: ~0.45
- Two different frameworks for reliable person detection
- Small differences in frames result in different prediction values

- Multiple use of containers and frameworks
- Flexible and extendable infrastructure design
- Web-based UI for visualisation and interactive evaluation
- Interactive outperforms automatic runs
- Multiple frameworks for same task may improve results
- Advantages in data fusion needed

Thank you for your attention.
