Visual and Textual Encoder Assembly for Ad-hoc Video Search

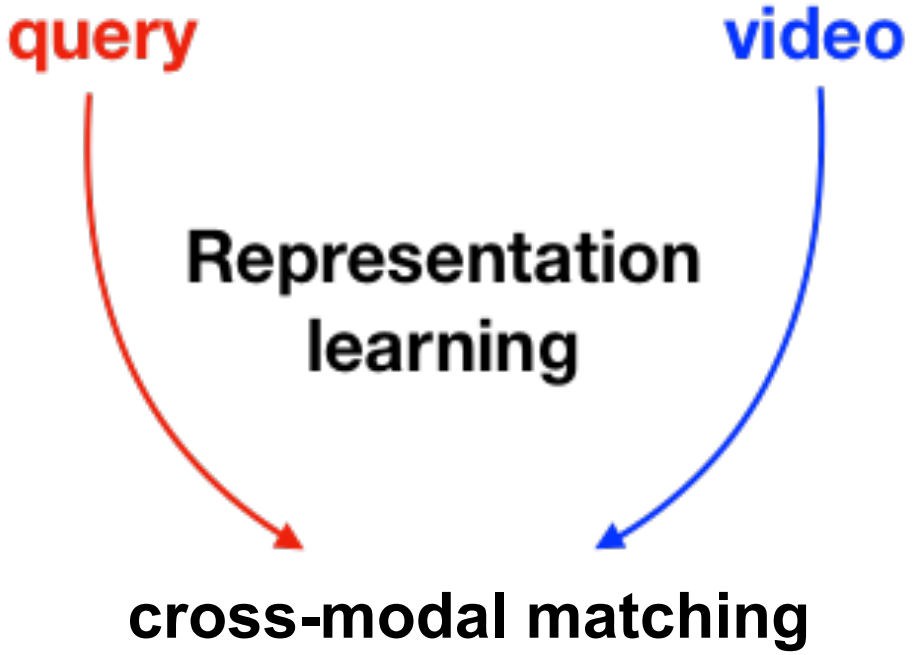
Aozhu Chen, Fan Hu, Xirong Li

AIMC Lab, School of Information, Renmin University of China
https://ruc-aimc-lab.github.io/

7 December 2021

Ad-hoc Video Search (AVS)

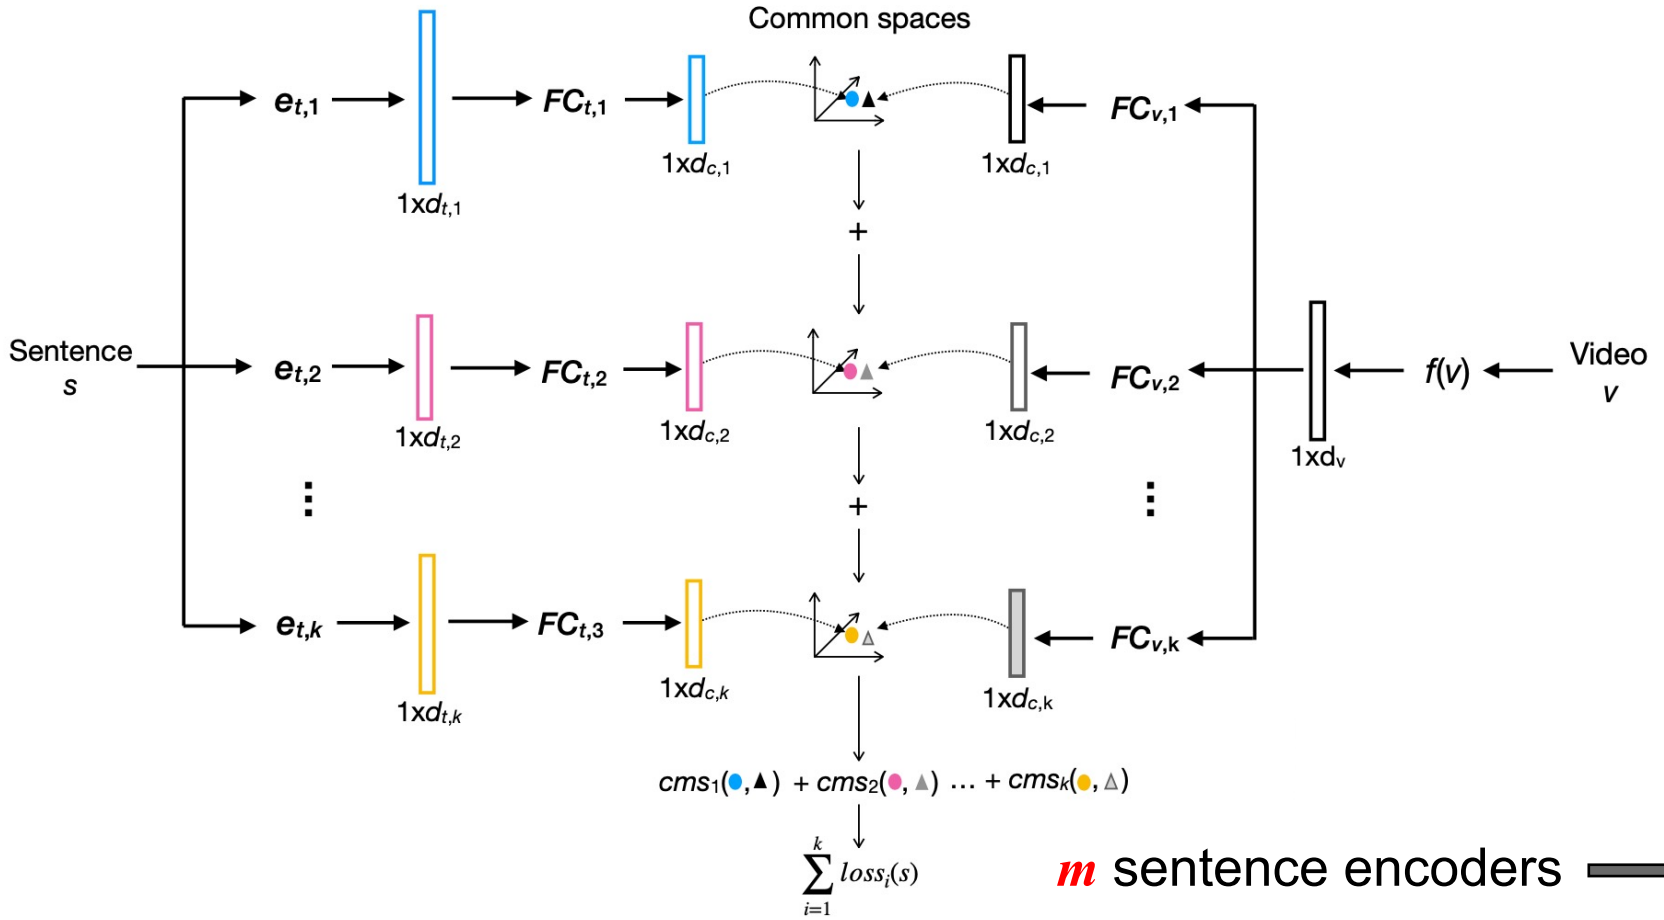
- Search for **unlabeled** videos by **natural-language** queries



Our Solution

Sentence Encoder Assembly (SEA)

- It supports text-video matching in multiple encoder-specific common spaces.



m sentence encoders ⟹ ***m*** common spaces

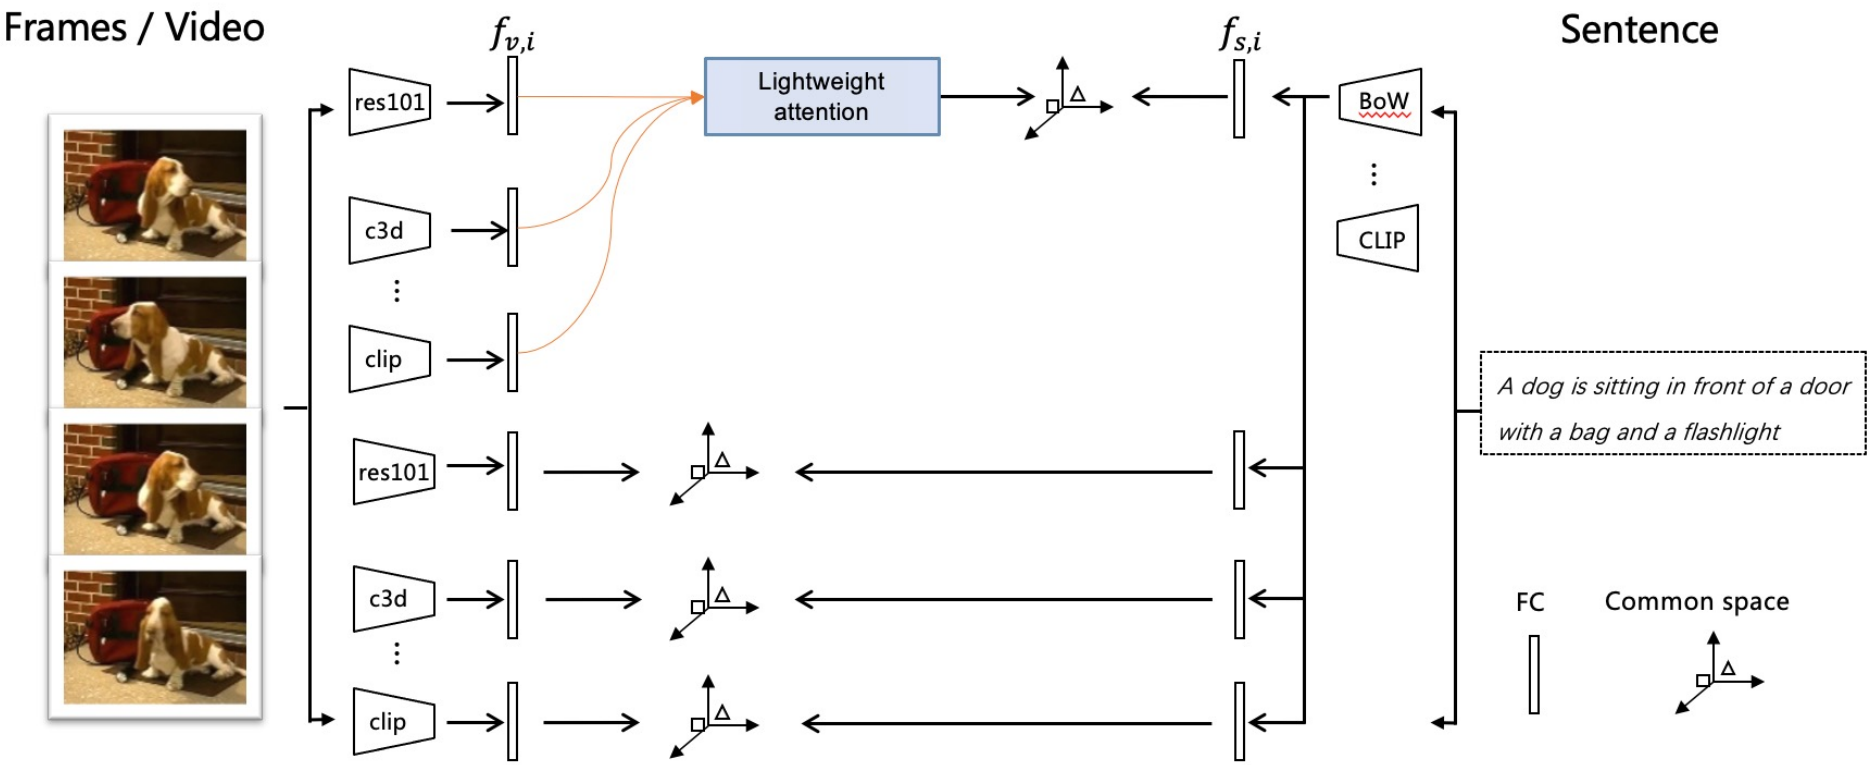
[1] Li et al., SEA: Sentence Encoder Assembly for Video Retrieval by Textual Queries, TMM 2020

[2] Li et al., Renmin University of China at TRECVID 2020: Sentence Encoder Assembly for Ad-hoc Video Search, TRECVID 2020

Our Solution

Multiple Encoder Assembly (MEA)

- It supports text-video matching in multiple feature-specific common spaces.



[1] Hu et al., Lightweight Attentional Feature Fusion for Video Retrieval by Text, arXiv 2021

Choice of Visual Encoders

Seven 2D / 3D features :

2D feature (frame-level)

- rx101
- re152
- wsl
- clip

3D feature (segment-level)

- c3d
- ircsn
- tf

Rank	Feature	TV19	TV20	MEAN
1	*c3d*	0.036	0.098	0.067
2	*tf*	0.102	0.142	0.122
3	*ircsn*	0.088	0.193	0.14
4	*clip*	0.155	0.180	0.168
5	*wsl*	0.135	0.210	0.173
6	*rx101-wsl*	0.148	0.208	0.178
7	*clip-wsl*	0.148	0.208	0.178
8	*rx101-re152-wsl*	0.159	0.208	0.184
9	*rx101-re152*	0.167	0.201	0.184
10	*rx101-clip*	0.196	0.223	0.210
11	*rx101-re152-wsl-clip*	0.182	0.238	0.210
12	*rx101-wsl-clip*	0.183	0.239	0.211
13	*rx101-re152-clip*	0.199	0.233	0.216

Model: SEA(bow, w2v)

Choice of Textual Encoders

Three sentence encoders:

- Bag-of-Words (bow)
- Word2Vec (w2v)
- CLIP (ViT-B/32)[1]

Feature	TV19	TV20	MEAN
Model: SEA(bow, w2v)			
rx101-wsl-clip	0.183	0.239	0.211
rx101-re152-clip	0.199	0.233	0.216
Model: SEA(bow, w2v, clip)			
rx101-re152-clip	0.199	0.249	0.224
rx101-wsl-clip	0.204	0.262	0.233

[1] Radford et al., Learning Transferable Visual Models from Natural Language Supervision, ICML 2021

Choice of (Pre-)Training Data

Five datasets :

- MSCOCO
- GCC
- MSR-VTT
- TGIF
- VATEX

Feature	TV19	TV20	MEAN
Pre-training on MS-COCO:			
rx101-wsl-clip-c3d	0.203	0.339	0.271
rx101-wsl-clip-tf	0.205	0.313	0.259
rx101-wsl-clip-ircsn	0.196	0.347	0.272
Pre-training on GCC:			
rx101-wsl-clip-ircsn	0.203	0.335	0.269
Pre-training on GCC and MS-COCO:			
rx101-wsl-clip-ircsn	0.209	0.357	0.283

Training data: MSR-VTT，TGIF and VATEX

Submissions(fully automatic track)

We submitted the following 4 runs:

MEA, SEA, CLIP and their combinations

Run id	**Model**	**Feature**	**(Pre-)Training Data**
Run1	Late fusion of Run3, Run4, CLIP	*rx101* *wsl* *clip* *ircsn*	MSCOCO, GCC MSR-VTT TGIF VATEX
Run2	MEA-reRank		
Run3	MEA(bow, w2v,clip)		
Run4	SEA(bow, w2v,clip)		
-	CLIP（ViT/B32）	-	-

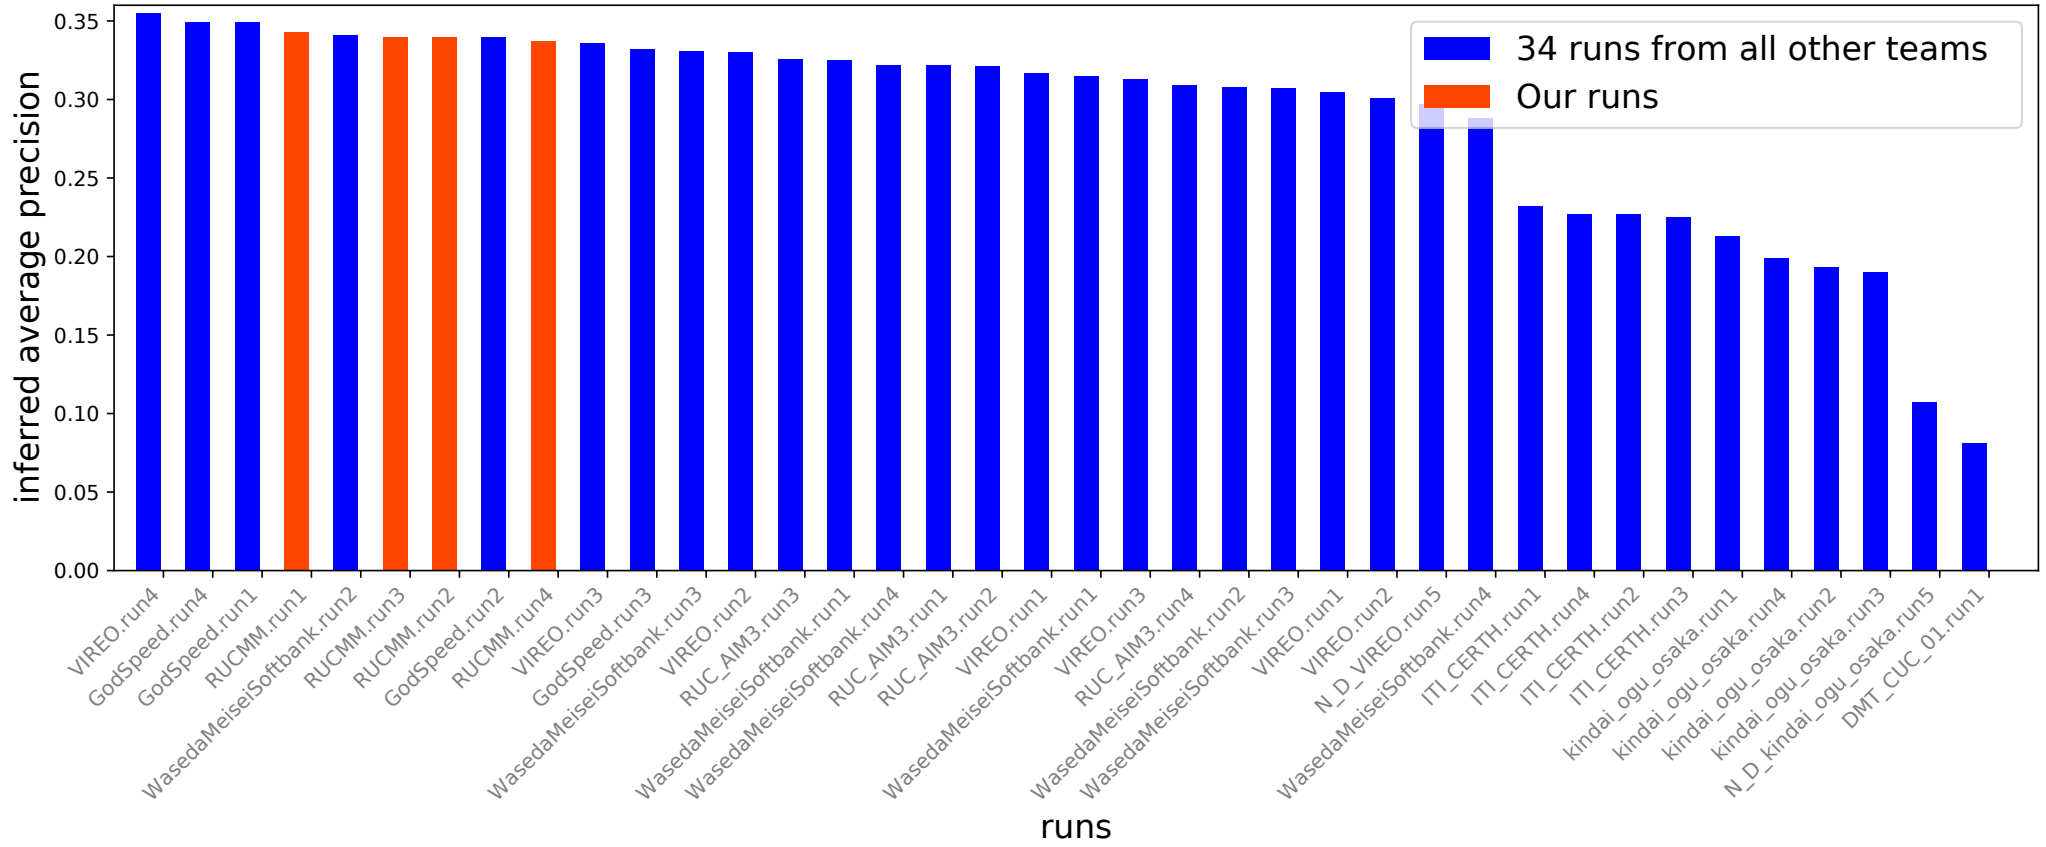
Performance on TV16-21 AVS Task

The performance of CLIP is lower, but it can bring better performance when doing late fusion.

Run id	**Model**	**TV16**	**TV17**	**TV18**	**TV19**	**TV20**	**TV21**	**MEAN**
Run1	Late fusion of Run3, Run4, CLIP	0.246	0.320	0.161	0.227	0.366	0.343	0.277
Run2	MEA-rerank	0.224	0.342	0.168	0.224	0.361	0.340	0.293
Run3	MEA	0.223	0.342	0.167	0.223	0.361	0.340	0.292
Run4	SEA(bow, w2v,clip)	0.232	0.255	0.135	0.213	0.358	0.337	0.239
-	CLIP	0.173	0.208	0.087	0.136	0.161	0.194	0.160
-	Late fusion of Run3, Run4	0.235	0.300	0.156	0.225	0.365	0.339	0.270

All fully automatic AVS submissions

Our submissions ranked the 3rd



Results of individual topics

More **blue** is better

More **red** is worse

Can be divided into 2 types:

- Easy topics: all **blue**
- Hard topics: all **red**

Easy queries become easier, hard queries remain hard.

Conclusions

To boost AVS performance

- Cross modal Matching Model
- Video/text feature
- (Pre-)Training data

Understanding **fine-grained** queries is still hard

- Attributes: number
- Positions: in the water, under a tree
