

SCHEMA Participation in TRECVID 2004

Vasileios Mezaris¹, Haralambos Doulaverakis¹, Stephan Herrmann², Bart Lehane³,
Noel O'Connor³, Ioannis Kompatsiaris¹, and Michael G. Strintzis¹.

¹Informatics and Telematics Institute (ITI)/Centre for Research
and Technology Hellas (CERTH)

²Institute for Integrated Systems, Munich University of Technology

³Centre for Digital Video Processing, Dublin City University, Ireland

Outline

- Background
- Canned system demo
- Under the hood:
 - Image analysis
 - MPEG-7 XM
 - Face classifier
 - Motion features
- Experimental setup & results
- Conclusions

SCHEMA NoE

- EU-funded Network of Excellence
 - Network of Excellence in Content-Based Semantic Scene Analysis and Information Retrieval
- 13 members & 28 affiliated members
 - Universities, research institutes, companies (SMEs & MNCs)
- Activities:
 - Researcher mobility (collaboration, exchanges)
 - Contributions to standards (MPEG-7, JPEG200)
 - Development of a Reference System for CBIR

SCHEMA participation in TRECVID

- Adapt Reference System for TRECVID experiments
- 2 Variants:
 - Text-based searching on ASR only
 - Text & image-based features:
 - Option 1: initiate search with text & high-level features ... use visual similarity thereafter
 - Option 2: initiate search with text, high-level features and example image ... use visual similarity thereafter

System based on Schema and MPEG-7 XM for the participation of Schema in TRECVID

In order to start a query you need to provide a **description**.

Please select topic number. A page containing example images for that topic will be displayed

Select topic

- ☐ Search using only text
- ☒ Search using text and images

[Choose new topic](#)

Topic #130: Find shots of a hockey rink with at least one of the nets fully visible from some point of view.

Option 1: Search using examples images with text filtering

Filtering keywords:

Face

- ☒ Shots can be either face or non face
- ☐ Shots do not contain face
- ☐ Shots contain face

Motion Activity

- ☒ Shots have very small motion activity
- ☒ Shots have small motion activity
- ☒ Shots have medium motion activity
- ☒ Shots have high motion activity
- ☒ Shots have very high motion activity

Camera Motion Activity

- ☒ Shots have small camera motion activity
- ☒ Shots have medium camera motion activity
- ☒ Shots have high camera motion activity

Time Elapsed 6:23

Submit new query
for this topic

0 shots selected

Select Region:

Acquisition of results

- In each variant and option, when the user found a keyframe/shot that was relevant to the topic, he would add it to the result set by clicking on it
 - Process similar to a shopping cart application

Image Analysis

- 2 region-based segmentation algorithms:
 - Modified RSST (MRSST)
 - Bottom-up colour-based pixel merging
 - K-Means-with-Connectivity-Constraint (KMCC)
 - Hierarchical k-means clustering of colour & texture features

MRSST

KMCC

MPEG-7 XM

- MPEG-7 eXperimentation Model (XM) used for:
 - Low-level feature extraction for images or regions
 - Descriptor matching for search & retrieval
- XM requires 3 modifications to make it suitable for use in a “real” IR system

XM Modification 1

- MultiImage module:
 - New module to support extraction and matching of multiple descriptors
 - Normalisation of working point of matching functions
 - Linear combination of distance values using default weights

MPEG-7 DESCRIPTORS SUPPORTED BY THE MULTIIMAGE MODULE

Color Layout	Edge Histogram
Color Structure	Homogeneous Texture
Dominant Color	Contour Shape
Scalable Color	Region Shape

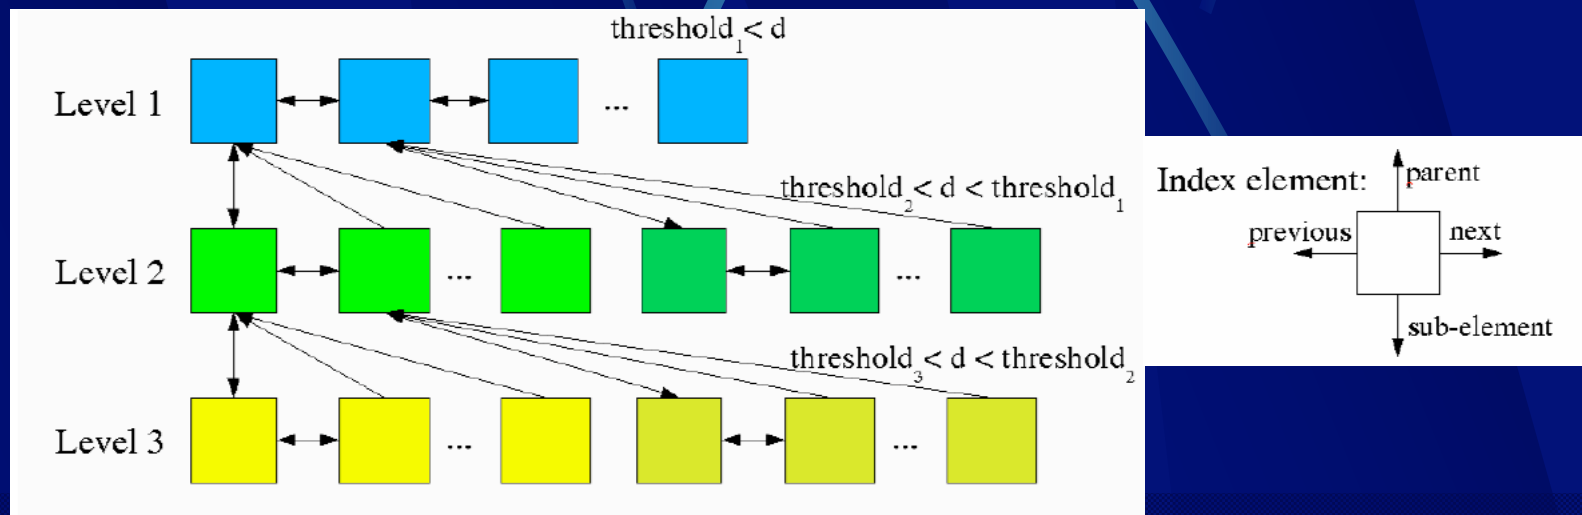

XM Modification 2

- XM Server
 - Re-engineer software to allow XM to run continuously in the background, accessed via TCP socket communication

XM Modification 3

- Indexing
 - Use pre-computed similarity values
 - Hierarchically partition search space

Face Classifier

- J. Luo and A. Savakis [ICIP 01]
- Extension:
 - Apply image segmentation
 - Classifier trained on segmented face regions
 - Significant improvement for distant faces

Motion Features

- MPEG-7 Motion intensity:
 - "Very Low", "Low", "Medium", "High", "Very High"
- Global camera motion:
 - Runs of 0 motion vectors in MPEG-1 P-frames
 - "Low", "Medium", "High" estimated using a Fuzzy C-Means algorithm

Experiments

- 8 users, each searching for 12 topics
 - 6 using text-only, 6 using text & image features
- 10 minutes were given to each tester to find as many shots as possible, relevant to the given topic
- Conducted remotely in 3 different labs
- 2 runs for each system submitted

Evaluation

Evaluation

Evaluation

SCHEMA vs Median (run XM_1)

SCHEMA vs Median (run XM_2)

SCHEMA vs Median (run Text_1)

SCHEMA vs Median (run Text_2)

Conclusions

- Performance of SCHEMA-XM better than SCHEMA-Text
 - Inclusion of low-level features, regions and high-level “filters” aids retrieval for certain topics
- Performed reasonably well in comparison to median ... for first timers

Thank you!
